rEcruit

Beyond CVs. Built on Reputation.

WHITEPAPER

Version 1.0 | October 2026

1. Abstract

rEcruit is a reputation-based expertise marketplace designed to connect skilled people with real opportunities.

Traditional hiring often relies heavily on CVs, qualifications, and self-reported experience. However, these indicators do not always provide a complete picture of someone's abilities or professional history.

rEcruit aims to introduce a reputation-driven approach where expertise can be showcased, professional contributions can be recognised, and reputation can help people discover opportunities.

> **Our mission is simple: help people build professional reputations that extend beyond traditional CVs.**

2. The Problem

Finding reliable expertise remains a challenge.

- **Limited verification:** CVs can describe experience without independently demonstrating it.
- **Fragmented reputation:** Professional credibility is often scattered across different platforms and personal networks.
- **Limited visibility:** Skilled individuals can struggle to demonstrate their abilities to potential clients and employers.
- **Difficulty evaluating expertise:** Hiring decisions can be difficult when reliable information about someone's past work is limited.

rEcruit aims to address these challenges by making professional reputation a central part of discovering and evaluating expertise.

3. The Solution

rEcruit is being built around a marketplace where people can showcase their expertise and where potential clients or employers can discover suitable professionals.

The platform's core experience is organised around two pathways:

Hire an Expertise

Discover professionals, explore their areas of expertise, and evaluate available reputation information when considering whom to hire.

List Your Expertise

Create a professional presence, showcase your skills, and build a reputation through relevant professional contributions and feedback.

The long-term objective is to make reputation useful beyond a profile page by connecting it with meaningful professional opportunities.

4. The Reputation System

Reputation is central to rEcruit's vision. The proposed system includes the following components.

4.1 Professional Profiles

Users will be able to showcase their expertise and relevant professional experience through profiles designed to help others understand what they offer.

4.2 Vouch

Vouch is intended to allow people with relevant experience working with a professional to support claims about that person's expertise or work.

The goal is to make professional credibility more informative than unsupported self-description.

4.3 Refute

Refute is intended to provide a mechanism for challenging professional claims that may be inaccurate or misleading.

The system must be designed carefully to discourage abuse, malicious accusations, and unfair reputational damage.

A refutation should not automatically be treated as proof of wrongdoing. Appropriate evidence, context, and safeguards will be important to the system's development.

4.4 Reputation Evaluation

rEcruit aims to make reputation information useful when evaluating expertise.

The precise scoring methodology, weighting of contributions, verification standards, and dispute-resolution mechanisms remain subject to product development.

Reputation should help inform decisions rather than guarantee someone's abilities or future performance.

5. Privacy and Identity

rEcruit's approach includes an emphasis on limiting unnecessary exposure of personal information.

The product direction includes the use of aliases rather than displaying users' full legal names publicly.

Profiles should focus on professional expertise, relevant contributions, and reputation information.

Privacy protections, identity verification requirements, and controls against impersonation will need to be developed in line with the platform's needs.

6. How the Marketplace Works

The intended user journey is straightforward:

1. **Create a profile:** A professional establishes a presence on rEcruit.
2. **Showcase expertise:** The professional identifies their skills and relevant experience.
3. **Build reputation:** Relevant professional relationships and contributions can support reputation development.
4. **Discover expertise:** Potential clients and employers explore professionals and available reputation information.
5. **Connect with opportunities:** Users can pursue suitable professional engagements.

The precise workflows and features will evolve as rEcruit is developed and tested.

7. Product Development Roadmap

rEcruit is in its early development and community-building stage. The roadmap below describes intended priorities rather than guaranteed release dates.

Phase 1: Foundation

- Establish the public website and community.
- Develop the product's core positioning and user experience.
- Gather feedback from potential users and professionals.

Phase 2: Core Marketplace

- Develop professional profiles.
- Build expertise discovery and search.
- Introduce the core Vouch and Refute concepts.
- Improve the presentation of professional reputation information.

Phase 3: Reputation Development

- Refine reputation evaluation.
- Improve safeguards against manipulation and abuse.
- Develop clearer approaches to evidence, disputes, and credibility.

Phase 4: Marketplace Growth

- Improve connections between expertise and hiring opportunities.
- Expand functionality based on user feedback.
- Explore additional tools that support professional reputation and marketplace participation.

Progression between phases will depend on development, testing, resources, and user feedback.

8. Principles and Safeguards

For a reputation marketplace to be useful, its reputation system must be credible and responsibly managed. rEcruit's development should prioritise:

- **Fairness:** Reputation should not be determined solely by popularity.
- **Accountability:** Contributions to reputation should be subject to appropriate safeguards.
- **Privacy:** Unnecessary disclosure of personal information should be avoided.
- **Transparency:** Users should understand the meaning and limitations of reputation indicators.
- **Abuse prevention:** The platform should work to reduce fake endorsements, coordinated manipulation, and malicious refutations.
- **Continuous improvement:** The system should evolve through testing and feedback.

These principles are intended to guide product development as the platform matures.

9. Long-Term Vision

rEcruit aims to become a marketplace where professional reputation helps people discover, evaluate, and engage expertise.

We believe that professional opportunities should not depend exclusively on the strength of a CV or access to established networks.

By connecting expertise with reputation, rEcruit seeks to create another way for skilled individuals to demonstrate credibility and access opportunities.

The long-term ambition is to make professional reputation more useful, accessible, and relevant to the people who create and seek value through their skills.

10. Conclusion

The future of professional opportunity should recognise more than what people claim on paper.

It should help people demonstrate their expertise, build credible professional reputations, and connect with opportunities where their skills matter.

> **rEcruit is being built toward that future.**
